.1. Technical Field The present invention relates to a liquid ejecting head and a liquid ejecting apparatus and, more particularly, to an ink jet recording head and an ink jet recording apparatus. 2. Related Art Recently, ink jet recording apparatuses that perform printing by ejecting ink through nozzles from nozzles on a nozzle formation surface of a recording head

that are formed in the form of a matrix have been used as image recording apparatuses. Such an ink jet recording apparatus can eject ink in the form of droplets from a nozzle formation surface by applying pressure to the recording head by means of a pressure generating element such as a heater element and causing the pressure generating element to generate heat, or by applying an electrostatic force to the recording head by applying an electric field to the

recording head. Furthermore, a recording head that has plural ejection ports and that performs simultaneous printing by causing a plurality of nozzles to eject ink in a single cycle by using a plurality of piezoelectric elements (for example, Japanese Unexamined Patent Application Publication No. 2001-244086 and Japanese Unexamined Patent Application Publication No. 2004-167564) has been developed as a recording head that has a smaller nozzle

diameter than that of a conventional recording head that performs recording by individual ejection from a single nozzle, and an operation has been proposed in which printing is performed using an ink jet recording head that has a small nozzle diameter and that can eject various types of inks, by means of a recording head that uses a piezoelectric element. Furthermore, a recording head including a liquid chamber that is communicated with a nozzle

formation surface through a common liquid chamber and that includes a plurality of nozzles and a common liquid chamber has been proposed. A recording head that performs recording by ejecting ink through nozzles by means of a piezoelectric element has been proposed. Furthermore, a recording head in which a common liquid chamber is formed inside a head substrate and in which nozzles are communicated with the liquid chamber on the nozzle

formation surface side from the common liquid chamber on the recording head side has been proposed (for example, Japanese Unexamined Patent Application Publication No. 2004-086390). The nozzles of a recording head that is used for ink jet recording are provided with an ink supply port that supplies ink to the nozzles, and a bubble generation chamber that communicates with each of the nozzles through 0cc13bf012

“*” is the new theme for this year. This will help you to know what to expect when you buy your tickets for a performance.Adobe unveils first public release of Flash for Linux as downloads reach half a million Adobe Systems has announced a beta version of Flash Player for Linux. The decision to release a version of Flash Player for Linux now marks a significant shift for Adobe, which has resisted calls from Linux users and developers since Flash was first ported to the platform by volunteer developers in 1997. Adobe has long claimed its position as the only company that can deliver Flash Player to multiple platforms, including Windows, Mac and Linux. That's a compelling argument for consumers and businesses, even though an independently developed version of Flash Player was also released for Linux in 2008. But Adobe is now clearly more comfortable with Linux – especially as video and Flash become more important to the Web. In releasing a Flash Player for Linux, Adobe is taking a direct swipe at Microsoft, which has been trying to discredit Adobe by attacking Flash. Microsoft's continuing efforts to make Flash Player compatible with Windows were once seen as a key step to helping it sell a new generation of PC users on the importance of installing Windows on their machines. At the same time, the company ran an ad in the New York Times highlighting Flash's shortcomings on Windows, despite the fact that more than 95 per cent of the Web still uses it. Adobe sees the emergence of a new Linux Flash player as a better strategy for both its own business and the Web at large. "The open source community has successfully implemented Flash Player on a number of platforms," wrote Maciej

Ceglowski, one of Adobe's most vocal supporters for Linux, in an email. "By converting the existing Flash Player code base to run on Linux, we can release it to the community as open source and help contribute to the broader Web as a whole." A number of volunteer programmers have been working for years on porting the Flash Player to Linux, and Adobe actually has been working on the project itself for years. But in order to release a version of Flash Player for Linux, the company needed to carefully overcome technical challenges with modern operating systems. "We recognize that Microsoft's attempts to kill Flash on Windows have been ineffective and therefore we wanted to demonstrate to Flash supporters that it's possible to support the Flash Player on multiple platforms," wrote a senior engineer with Adobe's Flash team. "This can be done using a consistent

European Commission President Jean-Claude Juncker said he was "concerned" about the vote and did not rule out the possibility of extending the member states' negotiating time, which is set to expire on June 28th, to lay the groundwork for another referendum. "Right now, we are going to react. I will go back to the Parliament and ask them to react in the best possible way," said Juncker during a telephone interview with Politico following the results, adding he believes the "majority of the French were fairly convinced" by the project, and that the main priority at the moment was to "heal the wounds".An inner-city barman who refused to serve a mixed race drink to a Caucasian couple has been ordered to pay damages and costs. A court heard a group of people were travelling in a car in Limerick city in December 2008 when a fight broke out between two men, one of whom accused the other of being racist. Judge Michael Walsh took into account that the individual concerned was a 28-year-old barman, who had served drinks at a number of different bars and restaurants and that he did not have a criminal record. Judge Walsh ordered the man to pay €500 in damages and €1,800 costs. The judge heard that at the moment, the man was working at a pub in the town of Belfield and his employer was also

applying to have his licence renewed. He told the court he had been driving along Pery Quay with three friends when they came to a stop because a fight was taking place. During the incident the man, from a mixed racial background, had refused to serve a mixed race drink to a Caucasian couple. During a hearing on Monday, Kevin McCallion BL, prosecuting, told the court that he and his friends realised that there was a fight taking place when the man said, 'This is not where we are going now'.
